This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a henefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 (1.8.C. 122 and 37 CFR 1.14. This collection is estimated to take 21 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patentand Trudemark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND PRES OR COMPLETED FORMS TO THISADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Proposed amendment to Claim 1:

1. (Currently amended) A method for dynamically selecting a firewall server for a web client, in particular a web browser, in a Transmission Control Protocol/Internet Protocol (TCP/IP) network comprising a plurality of firewall servers, said method comprising the steps of:

measuring performance and availability of each firewall server using measurement probes, wherein the step of measuring the performance and availability of each firewall server using measurement probes comprises the further step of including measuring the total response time needed for retrieving from a web server known information, in particular one or a plurality of known web pages, through each firewall server and wherein the step of measuring the total response time comprises the further steps, for each firewall server, of:

starting timing for a given one of said plurality of firewall servers;
establishing a connection with the web server through each firewall server said
given one;

retrieving the one or a plurality of known web pages from the web server; [[and]]

checking that the retrieved one or plurality of web pages contain one or a plurality of known keywords; and

stopping timing for said given one of said plurality of firewall servers; and dynamically selecting a firewall server according to the performance and availability measurements.
